SUMMARY

Network engineer at Silk Technologies, managing client networks and developing software, currently robotics and AI for Unitree robots. CCNA certified and preparing for the CCNP ENCOR exam. University Technician in Computer Programming, now studying Telecommunications Engineering.

EXPERIENCE

Network Engineer · Silk Technologies — Sep 2025 – Present

- Configure, maintain and troubleshoot client networks in industrial (OT) and critical sectors: mining, oil and gas, banking and government.
- Surveyed a major oil and gas company's network across 7 sites with SolarWinds: inventoried 600+ devices (switches, access points, routers, firewalls) and mapped the topology.
- Built the software to operate Unitree Go2 and G1 robots remotely: an on-robot telemetry agent that sends data to Splunk over HTTPS, a command relay with authentication, rate limiting, speed clamping and a dead-man switch, and a camera pipeline from the DDS bus to low-latency live video and NVR recording.
- Develop a real-time vision AI system for industrial inspection: a phone streams video through a gateway to YOLO and a vision-language model (Qwen3-VL on Ollama).
- Set up live visualization of the G1 humanoid's joint states in RViz with ROS 2, fully containerized in Docker.

Other experience

- **Claims Analyst**, Sabores Express (Jan – Oct 2025): handled store claims and order incidents.
- **Electoral Operator**, Correo Argentino (Aug – Nov 2023): digitized and transmitted polling-station results.

PROJECTS

- BookLibre: book-lending platform built by a team of five: Kotlin and Spring Boot API (REST and GraphQL) with role-based JWT auth, PostgreSQL, MongoDB and Redis, and a React and TypeScript frontend. Built the loans module (filtering, pagination, migration to MongoDB) and contributed to authentication.
- Solar System Simulator: real-time, to-scale simulation from NASA/JPL data (TypeScript, React, Three.js).
- Neural Network from Scratch: NumPy network with hand-derived backpropagation, 96.96% accuracy on MNIST, documented in a paper with a numerical gradient check.
- Music Player for Android: Kotlin, Jetpack Compose and Media3, with CI and signed releases.
- Space Invaders in x86 Assembly: DOS game with custom interrupt handlers for sound and randomness.

SKILLS

Networking	Cisco IOS, Cisco Meraki, ThousandEyes, SolarWinds, routing & switching, security, wireless, Cumulus Linux, SDN, Ansible, GNS3
Languages	Python, Kotlin, TypeScript, JavaScript, C, C++, x86 Assembly
Backend & data	Spring Boot, FastAPI, REST, GraphQL, JWT, SQL, PostgreSQL, MongoDB, Redis
Frontend & mobile	React, Svelte, Tailwind CSS, Three.js, Jetpack Compose
Robotics & AI	ROS 2, DDS, Unitree SDK, YOLO, vision-language models (Ollama), NumPy, scikit-learn
Agentic AI	Agentic coding with Claude Code, LLM integration, prompt engineering
DevOps & tools	Linux, Docker, Git, GitHub Actions, Splunk

CERTIFICATIONS

CCNA, Cisco (2026) · **CCNP Enterprise ENCOR**, Cisco (in progress) · **FCE**, Cambridge English (2024)

EDUCATION

Telecommunications Engineering · Universidad Nacional de San Martín (UNSAM) — 2026 – Present

University Technician in Computer Programming · UNSAM — 2023 – 2026

LANGUAGES

Spanish (native) · English (B2–C1, Cambridge FCE)
