SUMMARY

Network engineer at Silk Technologies, where I manage client networks and also develop software, currently robotics and AI for Unitree robots. CCNA certified and preparing for the CCNP ENCOR exam. Graduated as a University Technician in Computer Programming and now studying Telecommunications Engineering.

EXPERIENCE

Network Engineer · Silk Technologies — Sep 2025 – Present

- Configure, maintain and troubleshoot our clients' networks, including security and monitoring.
- My role also includes software development, from internal tools to robotics and AI.
- Built the software that makes Unitree Go2 and G1 robots operable remotely: an on-robot telemetry agent that sends data to Splunk over HTTPS, a command relay with authentication, rate limiting, speed clamping and a dead-man switch, and a camera pipeline from the robot's DDS bus to low-latency live video and NVR recording.
- Developing a real-time vision AI system for industrial inspection: a phone streams video through a gateway to YOLO and a vision-language model (Qwen3-VL on Ollama).
- Set up live visualization of the G1 humanoid's joint states in RViz with ROS 2, fully containerized in Docker.

Full Stack Web Developer · Freelance — 2024 – Present

- Design and build websites end to end: UI/UX, frontend, backend and database.

Earlier experience

- **Claims Analyst**, Sabores Express (2025): handled store claims and order incidents (Excel reports, Trello).
- **Electoral Operator**, Correo Argentino (Aug – Nov 2023): digitized and transmitted polling-station results in the 2023 presidential election.

PROJECTS

- BookLibre: book-lending platform built by a team of five: Kotlin and Spring Boot API (REST and GraphQL) with role-based JWT auth, PostgreSQL, MongoDB and Redis, and a React and TypeScript frontend. I built the loans module (endpoints with filtering and pagination, migration to MongoDB) and worked on authentication.
- Solar System Simulator: real-time, to-scale simulation of the Solar System from NASA/JPL ephemerides. TypeScript, React, Three.js.
- Neural Network from Scratch: NumPy network with hand-derived backpropagation, 96.96% accuracy on MNIST, documented in a paper with a numerical gradient check.
- Music Player for Android: Kotlin, Jetpack Compose and Media3, with CI tests and signed releases published by GitHub Actions.
- Space Invaders in x86 Assembly: 16-bit DOS game with custom interrupt handlers for sound and random numbers.

SKILLS

Networking	Cisco IOS, routing & switching, network security, wireless, Cumulus Linux, SDN, Ansible, GNS3
Languages	Python, Kotlin, TypeScript, JavaScript, C, C++, x86 Assembly
Backend & data	Spring Boot, FastAPI, REST, GraphQL, JWT, SQL, PostgreSQL, MongoDB, Redis
Frontend & mobile	React, Svelte, Tailwind CSS, Three.js, Jetpack Compose
Robotics & AI	ROS 2, DDS, Unitree SDK, YOLO, vision-language models (Ollama), NumPy, scikit-learn
DevOps & tools	Linux, Docker, Git, GitHub Actions, Splunk

CERTIFICATIONS

- **CCNA**, Cisco (2026)
- **CCNP Enterprise, ENCOR exam**, Cisco (in progress)
- **First Certificate in English (FCE)**, Cambridge English (2024)

EDUCATION

Telecommunications Engineering · Universidad Nacional de San Martín (UNSAM) — 2026 – Present

University Technician in Computer Programming · UNSAM — 2023 – 2026

LANGUAGES

Spanish (native) · English (B2–C1, Cambridge FCE)
